INTRODUCTION

- Relevance of the Research
- Scientific Novelty
- Research Goal
- Research Objectives
- Object and Subject of Research
- Research Hypothesis
- Methodological Basis
- Provisions Submitted for Defense
- Theoretical Significance
- Practical Significance
- Approbation of Research Results
- Publications

1 PROBLEM DOMAIN ANALYSIS AND CURRENT STATE OF AUTOMATED DIABETIC RETINOPATHY DIAGNOSIS

- 1.1 Medical and Epidemiological Context of Diabetic Retinopathy**
 - 1.1.1 Pathophysiology and Clinical Grading Systems**
 - 1.1.2 Screening Requirements in Resource-Limited Healthcare Settings**
- 1.2 Fundus Image Acquisition and Quality Variability**
 - 1.2.1 Sources of Image Degradation in Clinical Practice**
 - 1.2.2 Impact of Image Quality on Diagnostic Model Performance**
- 1.3 Deep Learning Approaches to Retinal Image Classification**
 - 1.3.1 Convolutional Neural Network Architectures for Medical Imaging**
 - 1.3.2 Transfer Learning Strategies in Ophthalmic Diagnostics**
- 1.4 Critical Analysis of Existing Automated DR Screening Systems**
- 1.5 Formulation of the Research Problem and Justification of Research Direction**
- Conclusions to Chapter 1**

2 THEORETICAL FOUNDATIONS OF IMAGE PREPROCESSING AND DEEP LEARNING FOR FUNDUS IMAGE ANALYSIS

- 2.1 Mathematical Foundations of Image Enhancement Techniques**
 - 2.1.1 Histogram Equalization and Adaptive Contrast Enhancement**
 - 2.1.2 Formalization of CLAHE with Controllable Threshold Parameters**
 - 2.1.3 Spatial Filtering and Noise Reduction Methods**
- 2.2 Theoretical Framework of Convolutional Neural Networks**
 - 2.2.1 Convolution, Pooling, and Feature Extraction Operations**
 - 2.2.2 Loss Functions and Optimization for Imbalanced Medical Datasets**

2.2.3 Regularization Techniques: Dropout, Batch Normalization, and Data Augmentation

2.3 Transfer Learning Theory and Domain Adaptation

2.3.1 Feature Transferability Across Visual Domains

2.3.2 Frozen-Layer versus Progressive Fine-Tuning Strategies

2.4 Mathematical Modeling of Laser-Tissue Interaction in Retinal Therapy

2.4.1 Coupled Thermal-Optical Model of Fundus Tissue Response

2.4.2 Implications for Diagnostic Image Feature Interpretation

Conclusions to Chapter 2

3 METHODOLOGY OF INTEGRATED PREPROCESSING-CNN PIPELINE DESIGN

3.1 Formalization of the Unified Preprocessing Pipeline

3.1.1 Pipeline Stage Specification: Resizing, Normalization, Enhancement, Augmentation

3.1.2 Modified CLAHE Algorithm with Simplified Threshold Control

3.1.3 Augmentation Strategy for Class Imbalance Mitigation

3.2 Design of Baseline and Enhanced CNN Architectures

3.2.1 Shallow Baseline CNN for Preprocessing Quality Validation

3.2.2 Enhanced Multi-Block CNN with Regularization Layers

3.3 Transfer Learning Methodology Using EfficientNetB0 and ResNet50

3.3.1 Architecture Adaptation for Five-Class DR Classification

3.3.2 Two-Stage Fine-Tuning Protocol Design

3.3.3 Weighted Loss Function Formulation for Ordinal Class Structure

3.4 Evaluation Framework and Performance Metrics

3.4.1 Multi-Metric Assessment: Accuracy, F1-Score, ROC-AUC, Cohen's Kappa

3.4.2 Cross-Validation and Statistical Reliability Protocols

Conclusions to Chapter 3

4 EXPERIMENTAL RESEARCH: PREPROCESSING IMPACT ON CNN DIAGNOSTIC PERFORMANCE

4.1 Datasets and Experimental Configuration

4.1.1 APTOS 2019, STARE, and Supplementary Clinical Image Corpora

4.1.2 Class Distribution Analysis and Data Partitioning Strategy

4.1.3 Hardware Constraints and Computational Resource Limitations

4.2 Experiment 1: Baseline CNN without Preprocessing versus Enhanced CNN

4.2.1 Training Dynamics and Convergence Analysis

4.2.2 Quantitative Comparison of Diagnostic Metrics

4.3 Experiment 2: Modified CLAHE Threshold Optimization on Small Datasets

4.3.1 Threshold Parameter Sensitivity Analysis

4.3.2 Impact on Feature Preservation in Microaneurysms and Small Vessels

4.4 Experiment 3: Transfer Learning Strategy Comparison

4.4.1 EfficientNetB0: Frozen versus Progressive Fine-Tuning

4.4.2 ResNet50: Feature Extraction versus End-to-End Fine-Tuning

4.4.3 Per-Class Performance Analysis under Severe Class Imbalance

Conclusions to Chapter 4

5 RELIABILITY VALIDATION AND COMPARATIVE ANALYSIS

5.1 Cross-Database Generalization Testing

5.1.1 Model Transferability Across Heterogeneous Image Sources

5.1.2 Stability Assessment under Varying Image Quality Conditions

5.2 Statistical Validation of Preprocessing Dominance Hypothesis

5.2.1 Ablation Study: Preprocessing Components versus Architectural Complexity

5.2.2 Quantitative Evidence for Image Quality as Primary Performance Driver

5.3 Comparative Analysis with Existing DR Diagnostic Systems

5.3.1 Benchmarking Against Published Results: IDx-DR, EyeNuk, DeepMind

5.3.2 Performance-Complexity Trade-Off Analysis

5.4 Limitations and Boundary Conditions of the Proposed Approach

Conclusions to Chapter 5

6 ARCHITECTURE OF AN AUTOMATED DR SCREENING SYSTEM FOR RESOURCE-LIMITED ENVIRONMENTS

6.1 System Requirements and Design Principles

6.1.1 Functional and Non-Functional Requirements Specification

6.1.2 Modular Architecture with PACS and EHR Integration

6.2 AI Processing Module Design

6.2.1 Preprocessing Engine with Configurable Pipeline Parameters

6.2.2 Inference Module with Model Selection Logic

6.3 Clinical Workflow Integration

6.3.1 Telemedicine and Portable Device Support for Rural Deployment

6.3.1.1 Deployment in distributed telemedicine systems

6.3.1.2 Integration with national eHealth platforms

6.3.1.3 Real-time remote DR screening in low-resource regions

6.3.2 Physician-in-the-Loop Decision Support Interface

6.4 Data Security and Regulatory Compliance Framework

6.4.1 GDPR/HIPAA-Aligned Data Management Protocols

6.4.2 Applicability to Kazakhstan Healthcare Infrastructure

Conclusions to Chapter 6

CONCLUSION
